

New Building Supply

Since its foundation in 1988, MEC has supplied a variety of newbuildings with fixed and loose container lashing equipment for customers in Asia, Europe and USA. In addition to our core business of container lashing equipment, MEC is also focusing on the development and design of container lashing bridges, Cell Guide systems for hold and deck as well as container stanchions. For such projects MEC is offering FEM calculations as well as workshop drawings for shipyards. At the moment MEC is planning to extend this field of business in the area of hatch covers by working closely with an Asian manufacturer. MEC positions itself as a system supplier for newbuildings and conversion in container shipping.
